

F.A.Q.

1) How much is the life of the capacitors?

Capacitor life is estimated to be five years

2) The device object must always be exposed to direct sunlight?

It is not necessary because the solar cells provide also in poor condition, a voltage sufficient to power the device;

3) How long does the alarm?

The alarm lasts three to five minutes;

4) Both devices also can be recharged via the mains?

Yes, with a power supply that provides 5 volts required to operate, usually those of the phones are fine;

5) The devices are still in operation?

Both devices have a switch so you can turn off when not needed;

6) The devices may interfere with cellular and / or similar?

No, because the system communicates with different frequencies than cell phones or other communications equipment.
